Revolution Surgical

Q-Close Premium Sutures

We support you

We make it easy from start to finish — **providing suture conversion codes and pricing comparisons, staff education charts, hands-on evaluation programs, and PAR level setup** through to seamless implementation and ongoing account support. Our team ensures a smooth, confident transition for every customer.

We Help Facilitate Sustainable Change

We're more than a supplier — we're your partner in responsible procurement. Our expert team delivers sustainable reductions **in wound-closure spend**, while actively **reducing single-use plastics**. Our **Race Track Packs** are reserved only for select codes where clinically necessary — ensuring both efficiency and environmental responsibility.

We Deliver Quality and Customizable Products

Our sutures are manufactured to the highest global standards by **one of the world's leading suture producers**, ensuring uncompromising performance and reliability. We also offer **customizable configurations** — allowing you to request unique combinations of **materials, needle sizes, suture lengths and tips** tailored to your facility's needs.

Join the Suture Revolution

At **Revolution Surgical**, we're reshaping the way hospitals and surgeons think about wound closure.

Our mission is simple — **deliver premium, evidence-based sutures without the red tape, inflated pricing, or impersonal service** that too often defines the industry.

We believe in partnership, not procurement. In progress, not complacency. In bringing clinicians closer to the innovations that improve outcomes every day.

WHY CHOOSE Q-CLOSE

1ST FOR QUALITY AND COST EFFECTIVENESS

Q-close ranks as the no.1 suture supplier on the current NHS Supply Chain wound closure framework

SIGNIFICANT SAVINGS

Delivering significant and sustainable reductions on your wound closure suture spend with up to 45% savings

CLINICALLY PROVEN

Randomised controlled trials for all Q-close suture polymers prove their clinical performance comparability to the world's leading suture brands

EASY PRODUCT RECOGNITION

Our familiar suture polymers, colour, product codes and packaging make it easier for theatre teams to manage the change and remember codes

INVENTORY OPTIMISATION

At Healthium we deploy our smart digital expert tool and inventory management system to reduce the hospital's burden

FOCUS ON TRAINING

We take product training seriously and our highly trained clinical team members promise to train you and support you in theatre

Q-CLOSE NEEDLES

Healthium is a global manufacturer that specialises in the manufacturing and marketing of medical devices and healthcare solutions. Healthium offers an impressive portfolio of quality wound closure products including Q-close sutures. Healthium produces 1 in 5 of the needles used in operations worldwide, therefore our needles are built on a strong history and expertise in wound closure.

Highest Grade Alloy

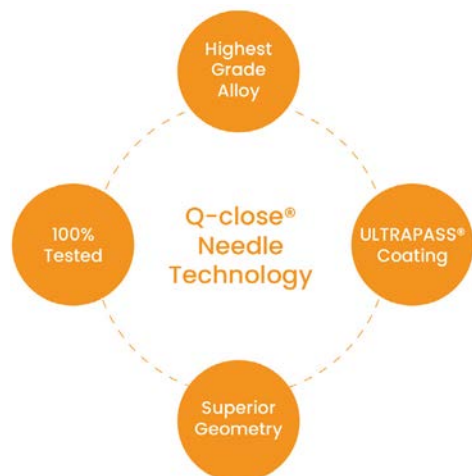

Our needles are manufactured with bend-resistant 300 Series stainless steel, making them the strongest needles possible, and offering greater control, and precision during surgery.

Superior Geometry

Healthium Q-close needles are manufactured with square-body geometry wherever required in order to provide additional strength, and increased stability in the needle holder.

ULTRAPASS Coating

Every needle in the Q-close suture range is coated with ULTRAPASS, a unique formulation of medical grade silicone. ULTRAPASS needles are designed so that the needle penetrates easily and consistently during repeated passage through tissue, thereby reducing force required and minimising tissue trauma.

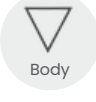

NEEDLE TIP GEOMETRIES

Reverse Cutting

Point

Body

CODE	CURVE
AX	Straight
BX	1/4 Circle
CX	3/8 Circle
DX	1/2 Circle

Triangular cross-section with the cutting edge on the outside edge of the needle curve, this gives the needle greater strength and resistance to bending. PRECISION needles feature a thinner, sharper tip to deliver enhanced penetration and superior control during surgery.

Reverse Cutting PRIME

Point

Body

CODE	CURVE
AX	Straight
BX	1/4 Circle
CX	3/8 Circle
DX	1/2 Circle

PRIME Reverse Cutting needles feature a long cutting profile with a rectangular body. The narrow point, fine wire diameter and fine taper ratio allow superior penetration of tissue.

Conventional Cutting

Point

Body

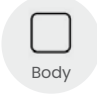

CODE	CURVE
AY	Straight
BY	1/4 Circle
CY	3/8 Circle
DY	1/2 Circle

Triangular cross-section needle with the cutting edge on the inside of the curve. PRECISION needles feature a thinner, sharper tip to deliver enhanced penetration and precise surgical control.

Conventional Cutting PRIME

Point

Body

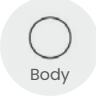

CODE	CURVE
AY	Straight
BY	1/4 Circle
CY	3/8 Circle
DY	1/2 Circle

PRIME Conventional Cutting needles feature a square body for stability and control. The cutting edge allows clean tissue penetration, ideal for denser tissues.

Taper Point

Point

Body

CODE	CURVE
BS	1/4 circle
CZ	3/8 circle
DZ	1/2 circle
EZ	5/8 circle
JZ	J needle

Round-bodied needle with a smooth tapering point that penetrates tissue by dilating and separating fibres rather than cutting, minimising tissue trauma and preserving tissue integrity.

Taper Blunt

Point

Body

CODE	CURVE
DR	1/2 circle

Round-bodied needle with a smooth tapering point that penetrates tissue by dilating and separating fibres rather than cutting, minimising tissue trauma and preserving tissue integrity.

Taper Cutting

Point

Body

CODE	CURVE
CK	3/8 circle
DK	1/4 circle
EK	5/8 circle

Round-bodied needle that tapers to a fine point with a short cutting tip, allowing initial penetration of dense tissue followed by smooth passage through tissue fibres to minimise trauma.

Spatula Cutting

Point

Body

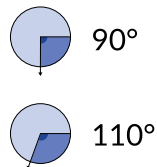

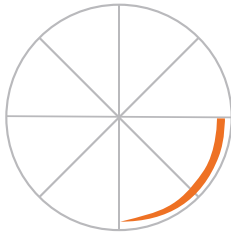

CODE	CURVE
CS	3/8 circle
DS	1/2 circle

Flat needle with a spatulated tip and cutting edges on the top and bottom surfaces, designed for precise, controlled passage through delicate layered tissue such as ophthalmic structures

NEEDLE CURVATURES

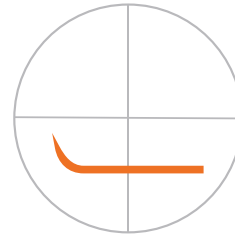

Needle curvature is important in relation to how easy it is to reach the tissue being sutured. For example, tissue in deep and confined spaces will require a greater curvature to assist the clinician in getting the required access. Q-close needles come in a range of shapes to meet the clinical need and procedure complexity.

1/4 Circle

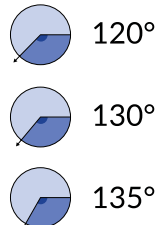

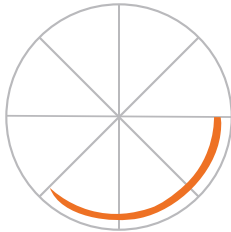

Common Applications: Ophthalmic & microsurgery

Ski

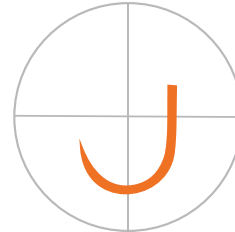

Common Applications: Laparoscopic procedures

3/8 Circle

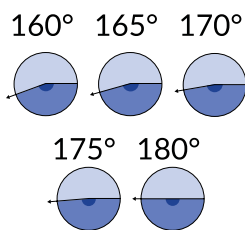

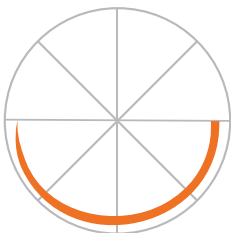

Common Applications: Skin, subcutaneous tissue, fascia, vascular, GI, plastics, oral & ophthalmic

Hook

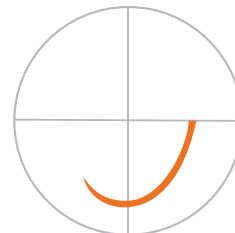

Common Applications: Laparotomy/fascial closure, abdominal wall, deep confined access

1/2 Circle

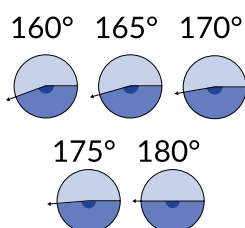

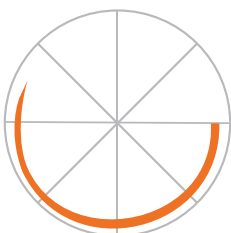

Common Applications: GI, urology, gynaecology, peritoneum, deep cavity closure

Compound Curved

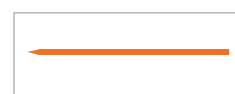

Common Applications: Ophthalmic, microsurgery, specialised confined access

5/8 Circle

Common Applications: Pelvic, urology, gynaecology, oral cavity, deep narrow spaces

Straight

Common Applications: Skin, subcuticular closure, ligatures, accessible soft tissue

Q-CLOSE SUTURE MATERIALS

Q-close®
Synth Fast

Polyglactin 910 **Package Colour** 

Suture Type	Synthetic Short-Term Absorbable
Structure	Braided
Coating	Polyglactin 370 Calcium Stearate
Colour	Undyed (20)
Tensile Strength (BSR+ Profile)	7 days - 45% retained
Absorption	42 days
Sizes U.S.P	6-0 to 0
Equivalents	Vicryl Rapide®, Velosorb Fast™, Safil® Quick, Novosyn® Quick

Q-close®
Synth

Polyglactin 910 **Package Colour** 

Suture Type	Synthetic Mid-Term Absorbable
Structure	Braided
Coating	Polyglactin 910
Colour	Violet (10) or Undyed (19)
Tensile Strength (BSR+ Profile)	In vivo strength retained: 7 days - 75% retained 14 days - 50% retained 28 days - 25% retained
Absorption	56-70 days
Sizes U.S.P	6-0 to 2
Equivalents	Vicryl®, Polysorb™, Safil®, Novosyn®

Q-close®
Mono

Poligecaprone 25 **Package Colour** 

Suture Type	Synthetic Mid-Term Absorbable
Structure	Monofilament
Coating	Uncoated
Colour	Violet (14) or Undyed (11)
Tensile Strength (BSR+ Profile)	In vivo strength retained: 7 days - 70% retained 14 days - 40% retained
Absorption	90-120 days
Sizes U.S.P	5-0 to 2
Equivalents	Monocryl®, Caprosyn™, Biosyn™, Monosyn®

Q-close®
PD Synth

Polydioxanone **Package Colour** 

Suture Type	Synthetic Long-Term Absorbable
Structure	Monofilament
Coating	Uncoated
Colour	Violet (9)
Tensile Strength (BSR+ Profile)	In vivo strength retained: 14 days - 75% retained 28 days - 65% retained 42 days - 55% retained
Absorption	180 days
Sizes U.S.P	5-0 to 1
Equivalents	PDS II®, Maxon™, MonoPlus®

Q-close®
Barbed

Polydioxanone **Package Colour** 

Suture Type	Synthetic Long-Term Absorbable
Structure	Monofilament Unidirectional Barb
Coating	Uncoated
Colour	Violet (27)
Tensile Strength (BSR+ Profile)	In vivo strength retained: 14 days - 75% retained 28 days - 65% retained 42 days - 55% retained
Absorption	180 days
Sizes U.S.P	4-0 to 2
Equivalents	Stratafix® Spiral PDO, V-Loc™ 180

Q-close®
Nylon

Nylon Polyamide 6 & Polyamide 6/6 **Package Colour** 

Suture Type	Synthetic Non-absorbable
Structure	Monofilament
Coating	Uncoated
Colour	Black (3) or Blue (15)
Tensile Strength (BSR+ Profile)	Prolonged tensile strength retention
Absorption	Gradual loss of tensile strength over time
Sizes U.S.P	6-0 to 2
Equivalents	Ethilon®, Dermalon™, Monosof™, Daiflon®

Q-close®
Poly-P

Polypropylene **Package Colour** 

Suture Type	Synthetic Non-Absorbable
Structure	Monofilament
Coating	Uncoated
Colour	Blue (8)
Tensile Strength (BSR+ Profile)	Permanent tensile strength retention
Absorption	Indefinite
Sizes U.S.P	10 to 4
Equivalents	Prolene®, Surgipro™, Premilene®, Optilene®

Q-close®
Silk

Organic Protein Fibroin **Package Colour** 

Suture Type	Natural Non-Absorbable
Structure	Braided
Coating	Bees Wax
Colour	Black (5)
Tensile Strength (BSR+ Profile)	Prolonged tensile strength retention
Absorption	Gradual loss of tensile strength over time
Sizes U.S.P	5-0 to 1
Equivalents	Perma-Hand® Silk, Sofsilk™, Silkam®

Q-close®
Bond

Polyester **Package Colour** 

Suture Type	Synthetic Non-Absorbable
Structure	Braided
Coating	Silicone
Colour	Green (6) or White (17)
Tensile Strength (BSR+ Profile)	Permanent tensile strength retention
Absorption	Indefinite
Sizes U.S.P	5-0 to 5
Equivalents	Ethibond®, Ti-Cron™, Premicron®

Q-close® Synth Fast

Material polymer	Polyglactin 910 (90% glycolide and 10% lactide)	
Structure	Multifilament, braided	
Suture type	Synthetic, Fast Absorbable	
Coating	Polyglactin 370 (30% glycolide and 70% lactide) and calcium stearate	
Colour	Undyed	
Gauge sizes available	U.S.P. 6/0 to 0 (Metric 0.7 to 3.5)	
Tensile strength retention	Days post implantation: – 7 days – 14 days – 21 days	Approximate % of tensile strength retained: – 53% – 14% – All original strength loses within 21 days
Mass absorption	By hydrolysis. Absorption is essentially complete approximately between 28 to 42 days.	
Sterilisation method	Ethylene oxide	
Intended use	Q-close Synth Fast suture is intended for use in general soft tissue approximation where only short-term wound support is required and where rapid absorption of the suture would be beneficial. Due to the rapid absorption profile, Q-close Synth Fast suture is useful for skin closure, particularly in paediatric surgery, episiotomies, circumcision and closure of oral mucosa. Q-close Synth Fast suture is also useful for conjunctival suturing in ophthalmic surgery.

Q-close® PDsynth

MONOFILAMENT
POLYDIOXANONE
STERILE SYNTHETIC
ABSORBABLE SURGICAL SUTURE

UP TO
42 DAYS
WOUND
SUPPORT

**ABSORBABLE
MONOFILAMENT**
For smooth passage
through tissue

Material polymer	Polydioxanone
Structure	Monofilament
Suture type	Synthetic, Absorbable
Colour	Violet
Gauge sizes available	U.S.P. 5/0 to 1 (Metric 1.0–4.0)
Tensile strength retention	Days post implantation: – 14 days – 28 days – 42 days Approximate % of tensile strength retained: – 74% to 79% – 65% to 70% – 50% to 60%
Mass absorption	By hydrolysis. Absorption is essentially complete within 180 to 220 days.
Sterilisation method	Ethylene oxide
Intended use	Q-close PD Synth suture is intended for use in general soft tissue approximation, including use in paediatric cardiovascular tissue where growth is expected to occur, and ophthalmic surgery. These sutures are particularly useful where the combination of an absorbable suture and extended wound support (up to six weeks) is desirable.

Q-close® Nylon

MONOFILAMENT
POLYAMIDE (NYLON)
STERILE NON-ABSORBABLE
SURGICAL SUTURE

**PROLONGED
TENSILE STRENGTH
retention in tissue**

**NON-ABSORBABLE
MONOFILAMENT**

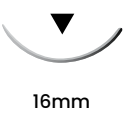

For smooth passage
through tissue

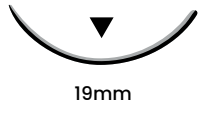

Material polymer	Polyamide 6 and Polyamide 6/6
Structure	Monofilament
Suture type	Synthetic, Non-absorbable
Colour	Black or Blue
Gauge sizes available	U.S.P. 6/0 to 2 (Metric 0.7 to 5.0)
Tensile strength retention	Prolonged tensile strength retention.
Mass absorption	While it is not absorbed, progressive hydrolysis of Q-close Nylon in vivo may result in gradual loss of tensile strength over a period of time.
Sterilisation method	Ethylene oxide
Intended use	Q-close Nylon suture is intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurological tissues.

BLACK BRAIDED SILK
STERILE NON-ABSORBABLE
SURGICAL SUTURE

PROLONGED
TENSILE STRENGTH
retention in tissue

NON-ABSORBABLE
MULTIFILAMENT

For easy handling
and secure knot tying

COATED

For smooth passage through
tissue and easy knot tie

Material polymer	Silk (composed of an organic protein called fibroin, which is derived from the domesticated species Bombyx mori of the family Bombycidae)
Structure	Multifilament, braided
Suture type	Natural, Non-absorbable
Coating	Bees Wax
Colour	Black
Gauge sizes available	U.S.P. 5/0 to 1 (Metric 1.0 to 4.0)
Tensile strength retention	Prolonged tensile strength retention.
Mass absorption	While Q-close Silk is not absorbed, progressive degradation of the proteinous silk fibres in vivo may result in gradual loss of the tensile strength over a period of time.
Sterilisation method	Ethylene oxide
Intended use	Q-close Silk suture is intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurological tissues.

BARBED

Material polymer	Polydioxanone	
Structure	Barbed	
Suture type	Synthetic, Absorbable	
Colour	Violet	
Gauge sizes available	4-0 TO 2	
Tensile strength retention	Days post implantation: - 14 days - 28 days - 42 days	Approximate % of tensile strength retained: - 75% - 65% - 50%
Mass absorption	By hydrolysis. Absorption is essentially complete within 180 to 220 days.	
Sterilisation method	Ethylene oxide	
Intended use	Q-Close Barbed 180 Sutures are sterile, absorbable, knotless surgical sutures intended for approximation and closure of soft tissues in surgical procedures where the use of an absorbable suture is appropriate. The barbed design enables secure tissue approximation without the need for knots, facilitating continuous wound closure and even tension distribution.

ASSOCIATED **WOUND CLOSURE**

Q-close®

Bone Wax

STERILE BONE WAX

HAEMOSTAT

Composition	A sterile mixture of White Bees wax, Hard Paraffin and Isopropyl Palmitate, a wax-softening agent
Mode of action	Q-close bone wax achieves local haemostatis of bone by acting as a mechanical (tamponade) barrier
Colour	Opaque
Sterilisation method	Ethylene oxide
Indications	For the control of bleeding from bone surfaces

Product Code	Material	Size	Packaging
S810	Sterile Bone Wax	2.5 gram tablet	12 foil packs per box

SURGISeal SKIN ADHESIVE

STYLUS APPLICATOR

TEARDROP APPLICATOR

Formulation	A sterile, professional liquid topical skin adhesive containing a monomeric 2-octyl cyanoacrylate formulation agent
Application	Applied topically over thoroughly cleaned, dried, approximated wound edges — held horizontal and applied from above. Use one thick continuous layer or two thin layers (allowing ~30 seconds between layers), then maintain manual approximation of the edges for ~60 seconds after the final coat.
Colour	Violet/purple on application (D&C Violet #2); dries clear
Drying Time	Full apposition strength is reached approximately 1 minute after the final layer is applied. Full polymerisation occurs when the top layer is no longer tacky to the touch — typically around 5 minutes after application, at which point a protective dry dressing may be applied if desired.
Indications	For topical application only, to hold closed easily approximated skin edges of wounds from surgical incisions (including punctures from minimally invasive surgery) and simple, thoroughly cleansed, trauma-induced lacerations. May be used in conjunction with — but not in place of — deep dermal sutures.

Product Code	Description	Box Quantity
SS-035T	SurgiSeal Topical Skin Adhesive Teardrop 0.35ml	12 per box
SS-050S	urgiSeal Topical Skin Adhesive Stylus 0.5ml	12 per box

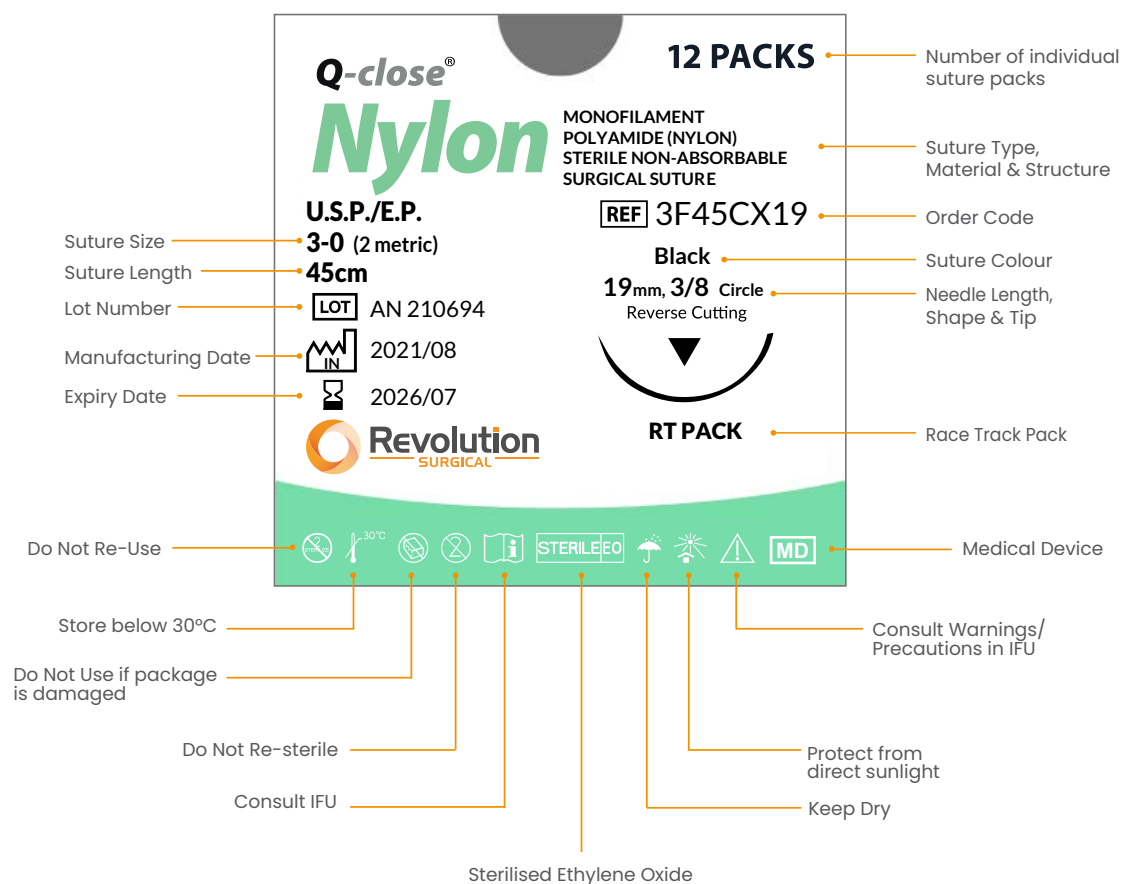

ZIP SKIN CLOSURE

Product Description	Non-invasive, puncture-free skin closure device for incisions and lacerations. Uses an isolation zone (scaffold-like structure that distributes closure forces) plus dynamic compression technology that flexes with patient movement.
Composition	Hydrocolloid skin adhesive with an adjustable force-distribution structure and micro-adjustable "zip" straps. Latex-free.
Wear Time	Typically 10–14 days; can remain up to 30 days.
Indications	Closure of surgical incisions and lacerations (Zip Surgical closes incisions with a gap of 5 mm or less). Specialties covered in your slicks: orthopaedics (total joints, foot & ankle, sports medicine, trauma, spine), cardiothoracic, cardiology & electrophysiology, plastic/reconstructive/dermatologic surgery, general surgery, OB-GYN, and ER laceration closure.

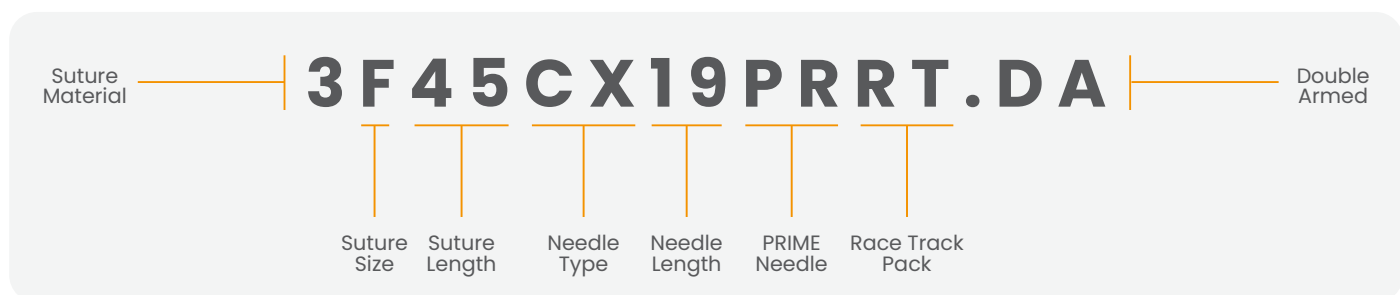

Product Code	Description	Box Quantity
PS2040	Zip 4 Skin Closure Device - 4cm length	10 per box
PS2080	Zip 8i Skin Closure Device - 8cm length	10 per box
PS1160	Zip 16 Skin Closure Device - 16cm length	10 per box
PS1240	Zip 24 Skin Closure Device - 24cm length	5 per box
